

Using jViewbox

How to Generate HTML Documentation Using javadoc

The entire jViewBox toolkit is documented following the standard javadoc convention. Follow the steps below to generate a complete set of jViewBox API documentation in HTML:

1. In a shell or command-prompt window, go to the directory where the `jviewbox2.0a_official_release_20030228.zip` file was expanded.
2. Create a directory for the documentation:
 - a. `mkdir doc`
3. Generate the HTML documentation using javadoc:
 - a. `javadoc -d doc -sourcepath src @javadoc.options`
4. Open `index.html` in the `doc` directory using a web browser.
